

Building Maintenance Engineers in the North collecting their vans from Evotech's Elland Head Office.

## Evotech engineers collect new vans

Evotech's mobile engineers recently took charge of ten brand new VW Transporter vans, kitted out inside and sporting livery that reflects the company's recently updated branding.

The VW transporter panel van features a redesigned front end and interior, has unprecedented connectivity and highly efficiently packaged load space making them the perfect choice for busy mobile maintenance engineers.

Five branded vans were delivered to the company's Elland head office, with an additional five delivered to its Basingstoke office destined for mobile engineers based in the South.

Company Director, John Lumb says, "Our mobile maintenance engineers spend a significant proportion of their day driving between jobs at client premises and it's very important that they have safe, up to date vans that are comfortable and economical to drive."

The VW transporter panel van was voted the second most reliable van in the Parkers Fleet News FN50 reliability survey last year and is consistently rated one of the best in class for fuel efficiency.

The company's new logo has been updated to better reflect its developing business and incorporates a fan icon with five blades, to signify Evotech's main service areas of Maintenance, Engineering, Building Performance, Compliance and Disaster Recovery.
